Ministry of Industry and Commerce

No 2005/DoIC. DoIH
Vientiane Capital City, date 28 Sept 2015

Decision on the Wood Products

- Pursuant to the Law on Industrial Processing no. 48/NA, dated 27 December 2013
- Decree on the Organization and Operation of the Ministry of Industry and Commerce no. 522/PM, dated 23 December 2011.

Minister to the Ministry of Industry and Commerce issues the decree:

Chapter I General Provisions

Article 1: Objective

This Decree defines principles, regulations and measures on the definition of category, type, form and sizes of the wood products in order to facilitate the management of production, use and distribution of wood products to be lawful and conforming with the regulations and laws, uniform in the whole country, aiming to modernize the wood processing industry, create added value, protection of environment and forest resource in an effective and sustainable manners, contribute to the continued and enhanced national socio-economic development.

Article 2: Wood Products

Wood products are the products derived from the raw material or semi finished material through the process or the production process of the wood processing factories to transform from their original state to the new product which is able to be supplied for the utilization or as the commodity for distribution.

Wood products are categorized; type and form in which each category, type and form has its clear size.

Article 3: Definitions

1. **Wood Processing Factories** refers to the industrial and handicraft factories conducting wood processing activities;
2. **Production Process** refers to the production process of the production line system of the factories, starting from moving process of raw material or semi finished material through the processing process based on its specific technical design of each category, type and form of such wood products;
3. **Value added** refers to the value of wood products gained from the production process each process or the production line system of the wood production factories;

4. **Raw material** refers to round log, tree root, stump, wood gall, tree branches or parts of the trees that are not yet get through the production process;
5. **Semi finished material** refers to the categories of sawed timber product or the categories of semi finished wood product or other parts/accessories that could be continued producing, processing as finished wood products;
6. **Round log** refers to part of the tree that was cut and separated from the stump and tree branches which the size of diameter or the diameter measurement and the length are as defined in article 1 of the Decision of Minister of Agriculture and Forestry no. 116/MAF.07, dated 17/05/2007 regarding the procedures on the measurement of round log, stump, wood gall and quality grading of round log;
7. **Tree root** refers to part of the tree that is the low or lowest point of the tree under the ground;
8. **Stump** refers to part of the tree derived from the cut and separated of the tree root from the trunk;
9. **Wood gall** refers to part of the tree with the shape and look as gall or as growing from the tree truck;
10. **Tree branches** refers to part that grow from any part of the tree trunk;
11. **Input** refers to one of the production processes with recognition and certification of correctness of the raw material or semi finished material moved into the compound of the wood processing factories;
12. **Output** refers to one of the production processes with recognition and certification of wood products to leave the factories;
13. **List of raw material or semi finished material of the Landing three (III)** refers to the certification document of raw material or semi finished material that moved into and stored at the landing three;
14. **Landing three (III)** refers to the location where the raw material or semi finished material is stored which is inside the compound of wood processing factory as awaiting for supplying to the processing process;
15. **List of Wood Products** refer the detailed record documents of wood products provided with quantity, volumes, size and values of the wood products;
16. **Plywood** refers to general plywood and chipboard which is the Product from plywood factory using raw materials from log, veneer, slicing board, or other particle of wood;
17. **Wood for construction activities** refers to wood products that was processed such as Mai Kheu, Mai Khao, Mai Si Yua, Mai Orkkai, Mai Tong, Mai Khang, etc. these wood products are both semi finished and finished wood products;
18. **Builder's carpentry and joinery** refers to wood product that is the component of the buildings such as frame, door/window panels, stairs, stair rod etc. this wood product can be in the form of semi finished and finished products;
19. **Parquet and wood flooring and wood component of the truck chassis** refers to parquet and wood flooring of all types and wood product to assemble of the truck chassis using the sawed wood, sliced wood processed through the production process such as cut to required size, heat dried, planning, grooving, tonguing, etc;
20. **Laminated Products/Finger joint** refers to wood product derived from the wood processing factory by using sliced wood, particle of wood and short piece of wood being laminated to get the required size through the process of heat dried, cut to the size, planning, shining, slicing and join with glue and press with heat;

- 21. Wooden container** refers to wood product that is processed through the production process with fine and artistic skills to be finished products for use such as tray, cup, box, vase, etc;
- 22. Other products of wood** refers to wood product that is processed through the industrial or handicraft production process with fine and artistic skills to be finished product for use such as chopsticks, ladle, spoon, clothe hanger, comb, etc.
- 23. Wood furniture** refers to wood product processed through the processing process of the furniture factory such as wardrobe, set of table and chairs...;
- 24. Wooden handicraft** refers to wood product processed through the handicraft production process such as carving, drilling, etc with artistic shape and could be use right away;
- 25. Veneer and slicing board** refers to wood product from wood processing factory which is processed through the veneering or slicing process, which used the raw material from round log. This product has intermediate value added and could be supplied to wood processing product to further process as finished product such as plywood, wooden sheet, table wooded sheet, etc.
- 26. Scrap wood, saw dust and plane dust** refers to the wood scrap caused by sawing, trimming, cutting, planning, carving activities.

Article 4: Scope of Application

This Decision is applied to individual, legal entities and organization both national and international that conduct their business operation in Lao PDR.

This Decision shall not cover the paper pulp, paper, charcoal, rattan and bamboo.

Chapter II

Category, Type and Form of Wood Products

Article 5: Category, Type and Form of Wood Products

Wood product consists of 3 categories such as processed sawed wood product, semi finished wood product and finished wood product in which each category has divided into different types and forms as detail provided in article 6,7 and 8 of this Decision.

Wood product with category or type or form that is different from what is defined in this Decision, the wood business operator shall propose to the department of industry and handicraft, MoIC in order to consider and put into category, type and form as appropriate.

Article 6: Processed sawed wood product (Sawn Wood Product)

Processed Sawed wood product is the wood product processed through the production process or the primary processing process with low value added: large sized sawed wood, sawed timber and trimmed wood.

- 1. Big sized sawed timber** refers to sawed timber with large size derived from the sawing of round log with low value added, which could be processed as semi finished product and finished product.

2. **Processed sawed timber** refers to sawed timber that sawed from large size sawed timber to have different sizes which is smaller than the size of large size sawed timber with low value added.
3. **Spited wood** refers to small size sawed wood derived from trimming of processed sawed timber, wood twigs and branches with low value added.

Article 7: Semi Finished Wood Product

The semi finished wood products are the wood products that processed through the production process or secondary processing process continued from the primary production process which is processed through the heat drying or sun drying, cut to the size, shaping, trimming to curve, planning and so on. But it could not be dismantled or assembled (knock – down) according to the design as one set or one unit with intermediate value added.

Semi finished wood products consist of many types such as veneer, slicing board, wood for construction, wooden component for the building and other semi finished wood product with size and shape similar to any of the finished wood products.

Semi finished wood product with size and shape similar to any of the finished wood products such as semi finished wood product with size and shape similar to the finished furniture product, parquet and finished wood flooring, finish wood component of the truck chassis and so on. This wood product could not be dismantled or assembled right away (knock-down) according to the design in one set or in one unit, it requires further processing to become finished wood products or assemble as finished product such as parts of the furniture (so far, table, chair, bed, wardrobe), chassis of the truck, parquet and wood flooring.

There are two forms of semi finished wood products, as follows:

1. In the form of unit or set of semi finished which could not be used right away, could not be assembled as a unit or set such as wardrobe, table, chair, bed and others.
2. In the form of parts that could not be use right away such as accessories for car; parquet; laminated wood; leg, beam, surface wood, handle of wardrobe, table, chair, bed and others.

Article 8: Finished wood product

Finished wood product is the wood product processed through production process or third processing process (final processing process) continuing from the secondary production process such as chopping, drilling, grooving, tonguing, cutting connecting part, joining, shining, screw with nut and so on; which could be used right away or could be dismantled or assembled right away (knock-down) with no further processing. The finished wood product has high value added.

Finished wood products consist of many different types such as plywood, wood for construction works, wood components of the building, parquet, wood flooring, wood component of the truck chassis, laminated wood, wooden containers, wooden utensils, furniture, block pressed saw dust; pieces pressed saw dust and other handicraft products:

There are two forms of the finished wood products, as follows

1. In the form of unit or finished set which could be used right away, could be assembled as a unit or a set right away such as wardrobe, table, chair, bed and others.
2. In the form of parts which could be used right away such as accessories of car; parquet, laminated wood, table leg, chair leg, wardrobe leg; side wall board, surface wood sheet, handle of the wardrobe and others.

Chapter III

Size of Wood Product

Article 9: Defining the Size of wood product

Defining the size of wood product is the defining of thickness, width and length of wood product of each category in order to ensure that the processing, use and distribution are conforming to their objective and ensure the fairness. Size of each category and types of the wood product is defined in the tables attached as annexes 1, 2 and 3 of this Decision.

Wood product with the size different from the size specified in this Decision, the wood processing business operator shall propose to the department of industry and handicraft, MoIC for consideration.

Article 10: Tables of the Size of wood product

Tables defining the size of wood product are the tables that defined the code of factory operation, original code of the chart of custom, list of wood products and size of wood product of each category, type and form; it clearly defined the thickness, width and length. Tables defining the size of wood product are the annexes 1, 2 and 3 of this Decision.

Chapter IV

Listing, monitoring and certification of wood products

Article 11: Listing of Wood Products

The wood processing factory operator shall make the list of its wood products and submit to the Department of Industry and Commerce in the province, capital city on a quarterly basis.

Listing of wood product shall be correct with actual category, type, form, size, value and characteristic of such wood products.

Article 12: Monitoring

Have the Department of Industry and Commerce of the province and the capital city monitored the movement of raw material and semi finished material, as follows:

1. Check the Input to ensure correctness of the raw material and semi finished material to be brought into the production process of the wood processing factory.

2. Check the Output to ensure correctness of the wood products to be moved out from the wood processing factory and the consistency with the results checked at the Input. Each Input and Output checks shall be made with memorandum and then report to the department of industry and handicraft, MoIC for information on a quarterly basis

Article 13: Certification of Wood product standard

Wood processing factory operator has the right to request for certification of wood product standard if necessary or required by the market. Certification of wood product standard shall follow the Decision on the Management of Industrial product, no. 0469/MoIC. DoIH, dated 05 March 2012.

Chapter V

Policy towards person with outstanding performance and Measures against Violator

Article 14: Policy towards person with outstanding performance

The factory operator that conducted its operation in conforming to the regulations and has outstanding performance, using standard raw material as well as created value added in the processing of finished product to supply domestically and internally, will be considered for the incentive as specified in the Law on industrial processing, especially in relation to the collection of value added tax or excise tax from the finished wood product shall be lower than the tax from the semi finished wood products and processed sawed wood product respectively.

Article 15: Measures against Violator

Individual, legal entity or organization violated this Decision shall be subject to educational measures, warning, disciplinary action, fines, pay for civil damage or be sanctioned according to the laws on a case by case basis.

Chapter VI

Final Provisions

Article 16: Implementation

It is assigned that the department of industry and handicraft to take leading role in implementation in coordination with department of industry and commerce of the province, Vientiane Capital City and other relevant agencies in implementing this Decision effectively.

Article 17: Effectiveness

This Decision is effective after it is signed and after it is printed in the Official Gazette 15 days onwards.

This Decision superseded the Decision no. 1415/MoIC..., dated 28/08/2008 and Notice no. 0051/MoIC..., dated 13 January 2009.

Regulations of the Industry and Commerce Sector existed previously, which in contrary with the contents of this Decision are null and void.

Minister, Ministry of Industry and Commerce

Signed and Stamped Mm. Khemmany Pholsena

- ❖ **Process Sawed wood product(Sawn wood product)** is the wood product processed through the first production process (primary) such as large sized sawed wood, sawed timber and trimmed wood with different sizes (thickness, width, length) based on the need of use and has low value added. This product is the products of the saw mill, which could be used to produce as semi finished product or finished product. Category and size of such product is defined in the below table 01:

Table 01: Sawn Wood Products

See in the attached PDF file.

- ❖ **semi finished wood products(semi wood products)** are the wood products that processed through the production process or secondary processing process (continued from the primary production process or at intermediate level) which is processed through the heat drying or sun drying, cut to the size, shaping, trimming to curve, planning and so on. But it could not be dismantled or assembled (knock –down) according to the design as one set or one unit with intermediate value added. This product is the product of the veneer processing factory, slicing processing factory, wood processing factory for the construction works and others. It could be used to produce as finished product. Category and size of such product is defined in the below table 02:

Table 02: **semi finished wood products (semi wood products)**

See in the attached PDF file.

Table 03: Finished wood product

Finished wood product is the wood product processed through production process or third processing process (continuing from the secondary production process or final processing process) such as chopping, drilling, grooving, tonguing, cutting connecting part, joining, shining, screw with nut and so on; which could be used right away or could be dismantled or assembled right away (knock-down) with no further processing. The finished wood product has high value added. This product is the product of plywood processing factory, wood processing factory for components of the buildings, wood flooring and parquet processing factory, wooden container factory, wood utensil factory, furniture factory, household handicraft making factory and others. Category and size of such product is defined in the below table 03:

Table 03: Finished wood product

See in the attached PDF file.
